Sample document for AI knowledge-retrieval testing. The product, company and all specifications are fictional.

1. Getting Started

Tallybrook Ledger is cloud accounting software for small and mid-sized businesses. You can use it in a browser or through the Windows desktop app.

Edition	Users	Companies	Single sign-on
Starter	Up to 3	1	No
Business	Up to 25	Up to 5	No
Enterprise	Unlimited	Unlimited	Yes (SAML 2.0 and OIDC)

Supported browsers: Chrome and Edge 120 or later, Firefox 121 or later, Safari 17 or later. The desktop app is available for Windows 11 only; there is no macOS desktop app, so Mac users work in the browser.

2. Company Setup

When you create a company you choose its base currency and the first month of the fiscal year. **The base currency cannot be changed after the first transaction is posted.**

Account range	Account type
1000-1999	Assets
2000-2999	Liabilities
3000-3999	Equity
4000-4999	Revenue
5000-6999	Expenses
7000-7999	Other income and expense (including FX gains and losses)

Retained Earnings is account **3200** in the default chart of accounts.

3. Users, Roles and Approval Limits

Role	Create invoices	Can approve invoices up to	Post journal entries	Close periods
Clerk	Yes	$5,000	Drafts only	No
Approver	Yes	$50,000	Yes	No
Controller	Yes	Unlimited	Yes	Yes
Auditor	No (read-only)	Cannot approve	No	No

> **Important:** Segregation of duties: nobody can approve an invoice they created themselves, whatever their limit. Invoices over $250,000 need approval from two different Controllers (dual approval).

If an invoice exceeds your limit, Tallybrook shows error TB-611 and routes the invoice to the next role up.

4. Invoicing

- Invoice numbers use the format **INV-YYYY-NNNNN**, for example INV-2026-00042. The sequence restarts at 00001 every fiscal year.
- Default payment terms are Net 30. Other options: Net 15, Net 45, Net 60 and Due on receipt.
- Optional late fee: 1.5% per month by default, applied after a 5-day grace period.
- A posted invoice cannot be voided or deleted. To reverse it, issue a credit note; credit notes are numbered with the prefix CN-.

5. Multi-Currency

Tallybrook supports 42 currencies. Exchange rates refresh automatically every day at **06:00 UTC**. A Controller can override a rate manually for a specific date.

Realized foreign-exchange gains and losses post to account 7810. Unrealized gains and losses from the period-end revaluation post to account 7820. If no rate exists for a transaction date you get error TB-509; enter a manual rate to continue.

6. Bank Feeds and Statement Import

Supported import formats: OFX, QFX, CSV, CAMT.053 and MT940. A CSV file can have at most 20,000 rows and be at most 25 MB. Connected bank feeds sync every 4 hours.

Automatic matching pairs a bank line with a transaction when the amount matches exactly and the dates are within 3 days of each other.

7. Keyboard Shortcuts

Shortcut (Windows)	Action
Ctrl+Shift+J	New journal entry
Ctrl+Shift+I	New invoice
Ctrl+Shift+B	New bill
Ctrl+K	Global search
Alt+R	Reconcile the current bank account
Ctrl+Shift+L	Lock the current period (Controller only)

> **Note:** On a Mac use Cmd instead of Ctrl and Option instead of Alt.

8. Month-End and Year-End Close

Periods are soft-locked automatically 10 days after month end. Posting into a soft-locked period needs a Controller. Posting into a locked period fails with TB-417.

Closing the fiscal year

1. Reconcile all bank accounts through the last day of the fiscal year.
2. Run the Unposted Transactions report and post or delete every draft.
3. Run the foreign-exchange revaluation.
4. Review the trial balance; a Controller signs off.
5. Run the Year-End Close wizard (Settings > Accounting > Close Fiscal Year). It moves net income to Retained Earnings (account 3200).
6. Lock all periods of the closed year.

Reopening a closed fiscal year is possible only in the Enterprise edition, only by a Controller, and it is recorded in the audit log.

9. Security

- Passwords need at least 14 characters, expire every 180 days, and cannot reuse any of the last 8 passwords.
- After **6 failed sign-in attempts the account is locked for 30 minutes**.
- Multi-factor authentication is mandatory for the Controller and Approver roles.
- Idle sessions sign out after 20 minutes.
- Single sign-on (SAML 2.0 or OIDC) is available in the Enterprise edition only.

10. Data Retention and Export

Transaction data is retained for 10 years. A deleted company can be restored within 30 days. Full export produces a ZIP file with CSV data and PDF documents; each company can run a full export once every 24 hours.

11. Error Messages

Code	Message	Resolution
TB-417	Period is locked	Ask a Controller to unlock it, or post in an open period.
TB-422	Journal entry is unbalanced	Debits must equal credits.
TB-509	Exchange rate unavailable for this date	Enter a manual rate.
TB-611	Approval limit exceeded	The invoice is routed to a higher role.
TB-703	Bank import file rejected	Use a supported format and at most 20,000 rows.

12. Support

Edition	Channel	First response
Starter	Email	2 business days
Business	Chat	8 business hours
Enterprise	Phone, 24x7	1 hour for critical issues

Standard support hours are 08:00-20:00 US Eastern time, Monday to Friday.
